*Note:* Bivariate correlations (pearson's r).

Figure A1. Effect of three forms of media use on societal perceptions.

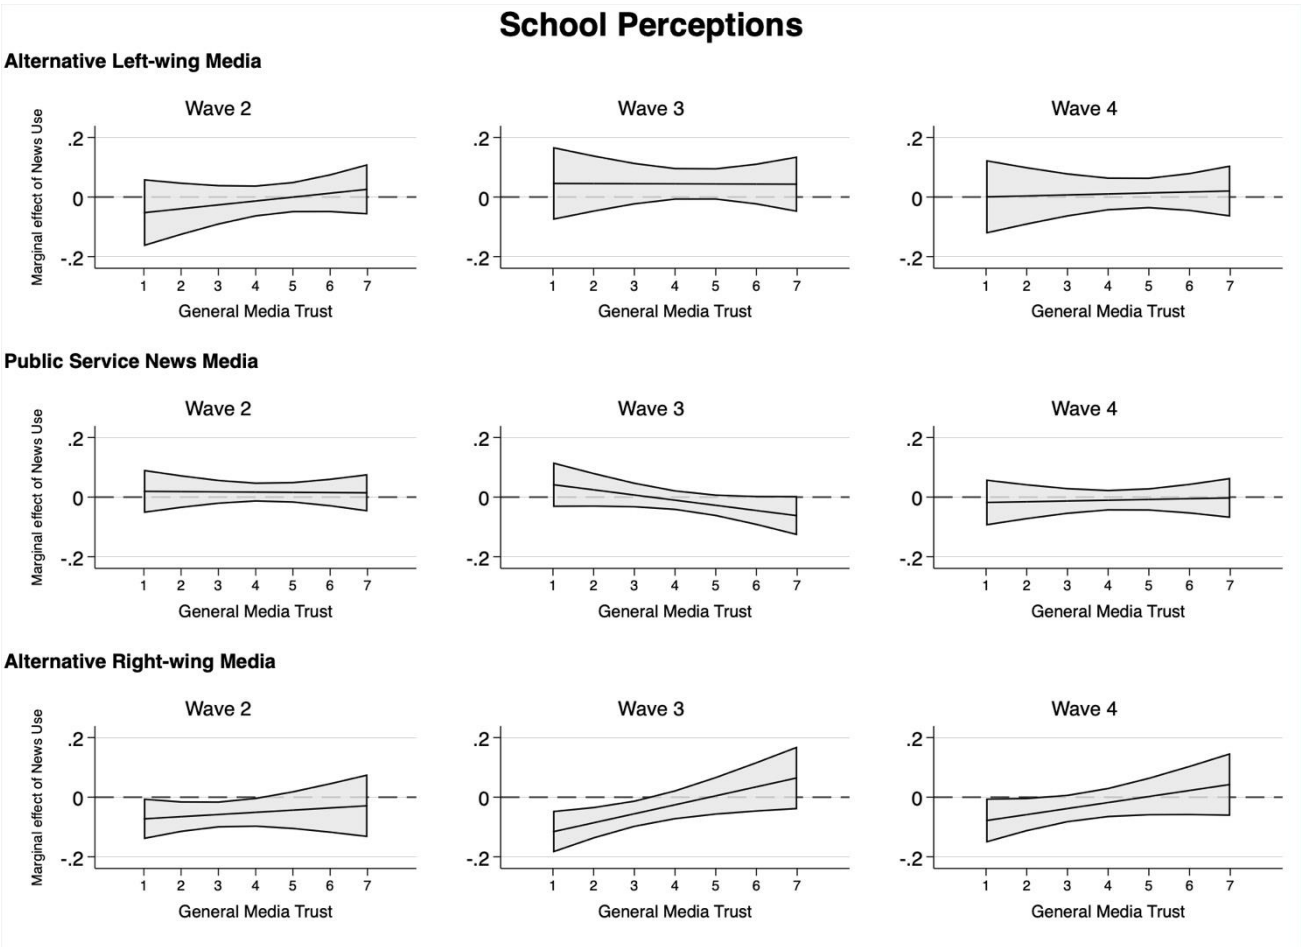

Note: Based on separate OLS models with lagged dependent variable from previous panel wave ( $t-1$ ). Model specification reflects findings in Figure 2 (Health care) and Figure 3 (School).

Figure A2. Marginal effect of three forms of media use on health care perceptions.

Note: Figure illustrates the marginal effect of three forms of media use on health care perceptions across different levels of media trust.

Figure A3. Marginal effect of three forms of media use on school perceptions.

Note: Figure illustrates the marginal effect of three forms of media use on health care perceptions across different levels of media trust.
