

**Appendix (transcript of the misinformation video)**

A host:

So doctor are there any benefits to sunscreen? We're bombarded with information that we have to use sunscreen.

Response:

It's so amazing because it's the exact opposite of what we've been told. Because they actually increase cancer; They actually increase aging; because what they cause in the skin when they're applied, the titanium nanoparticles, they cause what's called reactive oxygen species or ROS; those ROS actually cause skin aging; they actually damage collagen elastin, increase the aging of the skin, and they also lead to DNA damage that can lead to the cancer; so they're actually doing the exact opposite of what we've been told they do.
